INTRODUCTION

The Copyright to this document belongs to NLT Technologies, Ltd. (hereinafter called "NLT"). No part of this document will be used, reproduced or copied without prior written consent of NLT.

NLT does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NLT.

Some electronic products would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NLT, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three grades: "**Standard**", "**Special**", and "**Specific**".

Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard is required to contact an NLT sales representative in advance.

The **Standard**: Applications as any failure, malfunction or error of the products are free from any damage to death, human bodily injury or other property (Products Safety Issue) and not related the safety of the public (Social Issues), like general electric devices.

Examples: Office equipment, audio and visual equipment, communication equipment, test and measurement equipment, personal electronic equipment, home electronic appliances, car navigation system (with no vehicle control functions), seat entertainment monitor for vehicles and airplanes, fish finder (except marine radar integrated type), PDA, etc.

The **Special**: Applications as any failure, malfunction or error of the products might directly cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and required high level reliability by conventional wisdom.

Examples: Vehicle/train/ship control system, traffic signals system, traffic information control system, air traffic control system, surgery/operation equipment monitor, disaster/crime prevention system, etc.

The **Specific**: Applications as any failure, malfunction or error of the products might severe cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and developed, designed and manufactured in accordance with the standards or quality assurance program designated by the customer who requires extremely high level reliability and quality.

Examples: Aerospace system (except seat entertainment monitor), nuclear control system, life support system, etc.

The quality grade of this product is the "**Standard**" unless otherwise specified in this document.

1. OUTLINE

1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL128102AC29-17 is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

1.2 APPLICATION

- Color monitor system

1.3 FEATURES

- Ultra-wide viewing angle (Super Fine TFT (SFT))
- Wide color gamut
- High luminance
- High contrast
- LVDS interface
- Selectable LVDS data input map
- LED backlight type
- LED driver circuit Built-in

2. GENERAL SPECIFICATIONS

Display area	376.32 (H) × 301.056 (V) mm
Diagonal size of display	48cm (19.0 inches)
Drive system	a-Si TFT active matrix
Display color	16,777,216 colors
Pixel	1,280 (H) × 1,024 (V) pixels
Pixel arrangement	RGB (Red dot, Green dot, Blue dot) vertical stripe
Dot pitch	0.098 (H) × 0.294 (V) mm
Pixel pitch	0.294 (H) × 0.294 (V) mm
Module size	396.0 (W) (typ.) × 324.0 (H) (typ.) × 18.0 (D) (typ.) mm
Weight	2,100 (typ.), 2,310 (max.) g
Contrast ratio	1000:1 (typ.)
Viewing angle	At the contrast ratio ≥10:1 <ul style="list-style-type: none">• Horizontal: Right side 88° (typ.), Left side 88° (typ.)• Vertical: Up side 88° (typ.), Down side 88° (typ.)
Designed viewing direction	• Viewing angle with optimum grayscale ($\gamma \approx 2.2$): Normal axis (perpendicular)
Polarizer surface	Antiglare
Polarizer pencil-hardness	2H (min.) [by JIS K5600]
Color gamut	At LCD panel center 72% (typ.) [against NTSC color space]
Response time	$T_{on} + T_{off}$ (10% ← → 90%) 25ms (typ.)
Luminance	At the maximum luminance control 800 cd/m ² (typ.)
Signal system	LVDS 2port (Receiver: THC63LVDF84B, Thine Electronics Inc. or equivalent) [8bit digital signals for data of RGB colors, Dot clock (CLK), Data enable (DE)]
Power supply voltage	LCD panel signal processing board: 5.0V LED Driver board: 12.0V
Backlight	LED backlight type built in LED Driver Circuit
Power consumption	At BL Duty Ratio=100%, Checkered flag pattern 45.0W (typ.) include LED driver board

	B RTP signal	High	VBPH	2.3	-	3.3	V	
		Low	VBPL	0	-	0.6	V	
	BRTC signal	High	VBCH	2.3	-	3.3	V	
		Low	VBCL	0	-	0.6	V	
	PWSEL signal	High	VBSH	2.3	-	3.3	V	
		Low	VBSL	0	-	0.9	V	
Input current for signals	BRTI signal		IBI	-200	-	200	μA	-
	B RTP signal	High	IBPH	-	-	500	μA	
		Low	IBPL	-500	-	-	μA	
	BRTC signal	High	IBCH	-	-	5,000	μA	
		Low	IBCL	-5,000	-	-	μA	
	PWSEL signal	High	IPSH	-	-	5,000	μA	
		Low	IPSL	-5,000	-	-	μA	

4.3.3 LED driver board current wave

Rush peak current 4,000 mA

Duty: At the maximum luminance control 100% to at the minimum luminance control 1%.

Luminance control frequency: 255 Hz (typ.)

Note1: Luminance control frequency indicate the input pulse frequency, when select the external pulse control. See "4.6.2 Detail of B RTP timing".

Note2: The power supply lines (VDDDB and GNDB) have large ripple voltage during luminance control. There is the possibility that the ripple voltage produces acoustic noise and signal wave noise in audio circuit and so on. Put a capacitor (5,000 to 6,000μF) between the power supply lines (VDDDB and GNDB) to reduce the noise, if the noise occurred in the circuit.

PRELIMINARY

NLT Technologies, Ltd.

NL128102AC29-17

4.3.4 Power supply voltage ripple

This product works, even if the ripple voltage levels are beyond the permissible values as following the table, but there might be noise on the display image.

Power supply voltage		Ripple voltage (Measure at input terminal of power supply)	Unit
VDD	5.0V	≤ 100	mVp-p
VDDDB	12.0V	≤ 200	mVp-p

Note1: The permissible ripple voltage includes spike noise.

Note2: The load variation influence does not include.

Example of the power supply connection

a) Separate the power supply

b) Put in the filter

4.3.5 Fuse

Parameter	Fuse		Rating	Fusing current	Remarks
	Type	Supplier			
VDD	FCC32252AD	KAMAYA ELECTRIC Co.,Ltd.	2.5A	6.25A, 5 seconds maximum	Note1
			32V		
VDDb	CRUCQ12LHK6A125V	CONQUER ELECTRONICS Co.,Ltd.	6.0A	18.0A, 3 seconds maximum	
			63V		

Note1: The power supply capacity should be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

PRELIMINARY

NLT Technologies, Ltd.

NL128102AC29-17

4.4 POWER SUPPLY VOLTAGE SEQUENCE

4.4.1 LCD panel signal processing board

5

*1 In terms of voltage variation (voltage drop) while VDD rising edge is below 4.5 V, a protection circuit may work, and then this product may not work.

*2 These signals should be measured at the terminal of 100Ω resistances.

Note1: Display signals (DA0+/-, DA1+/-, DA2+/-, DA3+/-, CKA+/-, DB0+/-, DB1+/-, DB2+/-, DB3+/-, CKB+/-) and TxSEL signal must be "0" voltage, exclude the VALID period (See above sequence diagram). If these signals are higher than 0.3V, the internal circuit is damaged.

If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. VDD should be cut when the display and function signals are stopped.

Note2: VDD should be 4.5 V or more while VDD ON period.

Note3: The backlight should be turned on within the valid period of display and function signals, in order to avoid unstable data display.

Note4: T_f must be less than or equal to T_r in order to avoid any damage to the internal circuit.

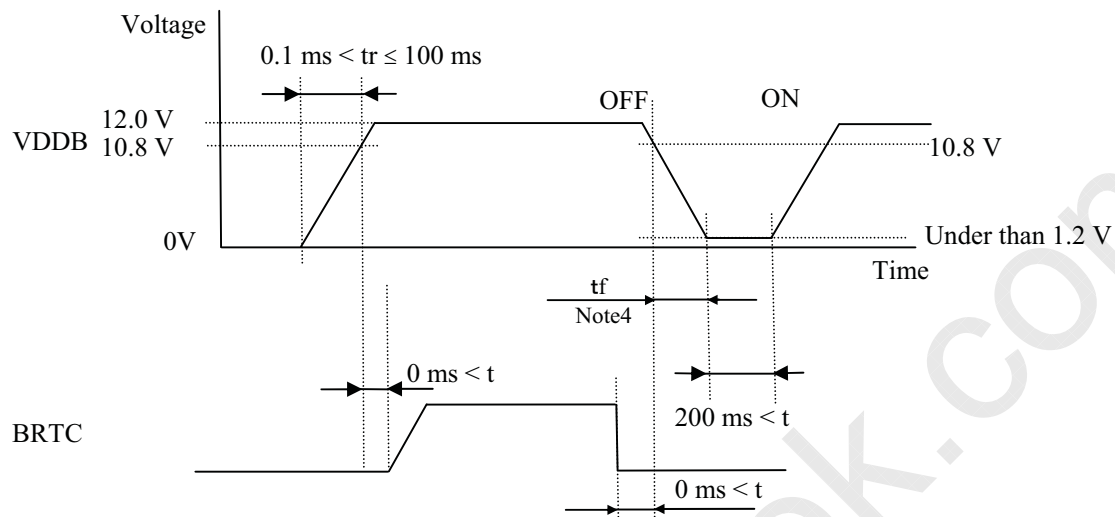

5

PRELIMINARY

NLT Technologies, Ltd.

NL128102AC29-17

4.4.2 LED driver board

Note1: The backlight should be turned on within the valid period of LVDS signals, in order to avoid unstable data display.

Note2: If t_r is more than 100 ms, the backlight will be turned off by a protection circuit for LED driver board.

Note3: When VDDB is 0V or BRTC is Low, PWSEL must be set to Low or Open

Note4: t_f must be less than or equal to t_r in order to avoid any damage to the internal circuit.

<div>Pulse width modulation</div> <div>Note1 Note2 Note5</div>	<div><div>• Adjustment</div><p>Pulse width modulation (PWM) method works, when PWSEL terminal is Low and PWM signal (BRTP signal) is input into BRTP terminal. The luminance is controlled by duty ratio of BRTP signal.</p></div> <div><div>• Luminance ratio Note3</div><table><tr><th>Duty ratio</th><th>Luminance ratio</th></tr><tr><td>0.01</td><td>1% (typ.) (At frequency: 325 Hz)</td></tr><tr><td>1.0</td><td>100% (Max. Luminance)</td></tr></table></div>	Duty ratio	Luminance ratio	0.01	1% (typ.) (At frequency: 325 Hz)	1.0	100% (Max. Luminance)	Low	BRTP signal
Duty ratio	Luminance ratio								
0.01	1% (typ.) (At frequency: 325 Hz)								
1.0	100% (Max. Luminance)								

Note1: In case of the variable resistor control method and the voltage control method, noises may appear on the display image depending on the input signals timing for LCD panel signal processing board.

Use PWM method, if interference noises appear on the display image!

Note2: The LED driver board will stop working, if the Low period of BRTP signal is more than 50ms while BRTP signal is High or Open. Then the backlight will not turn on anymore, even if BRTP signal is input again. This is not out of order. The LED driver board will start to work when power is supplied again.

Note3: These data are the target values.

Note4: Do not set the variable resistor is less than 1kΩ or BRTI voltage is less than 0.1V. Otherwise flickers may cause or the LED may be turned off.

Note5: See "4.6.2 Detail of BRTP timing".

PRELIMINARY

NLT Technologies, Ltd.

NL128102AC29-17

4.6.2 Detail of B RTP timing

(1) Timing diagrams

• Outline chart

• Outline chart

(2) Each parameter

Parameter	Symbol	min.	typ.	max.	Unit	Remarks
PWM frequency	f_{PWM}	185	-	1k	Hz	Note1,2,3
PWM duty ratio	DR_{PWM}	1	-	100	%	Note4,5
PWM pulse width	tPWH	30	-	-	μs	Note1,4,5

Note1: Definition of parameters is as follows.

$$f_{PWM} = \frac{1}{tPW}, \quad DL = \frac{tPWH}{tPW}$$

Note2: A recommended f_{PWM} value is as follows.

$$f_{PWM} = \frac{2n-1}{4} \times fv$$

(n= integer, fv= frame frequency of LCD module)

Note3: Depending on the frequency used, a noise may appear on the screen, please conduct a thorough evaluation.

Note4: While the BRTC signal is high, do not set the tPWH (PWM pulse width) is less than 30μs. It may cause abnormal working of the backlight. In this case, turn the backlight off and then on again by BRTC signal.

Note5: Regardless of the PWM frequency, both PWM duty ratio and PWM pulse width must be always more than the minimum values.

Note1: LSB (Least Significant Bit) – RA0, GA0, BA0, RB0, GB0, BB0

MSB (Most Significant Bit) – RA7, GA7, BA7, RB7, GB7, BB7

Note2: Twist pair wires with 100Ω (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.

Note3: Input signal RSVD is not used inside the product, but do not keep pin open to avoid noise problem.

4.8 DISPLAY COLORS AND INPUT DATA SIGNALS

This product can display in equivalent to 16,777,216 colors in 256 gray scales. Also the relation between display colors and input data signals is as the following table.

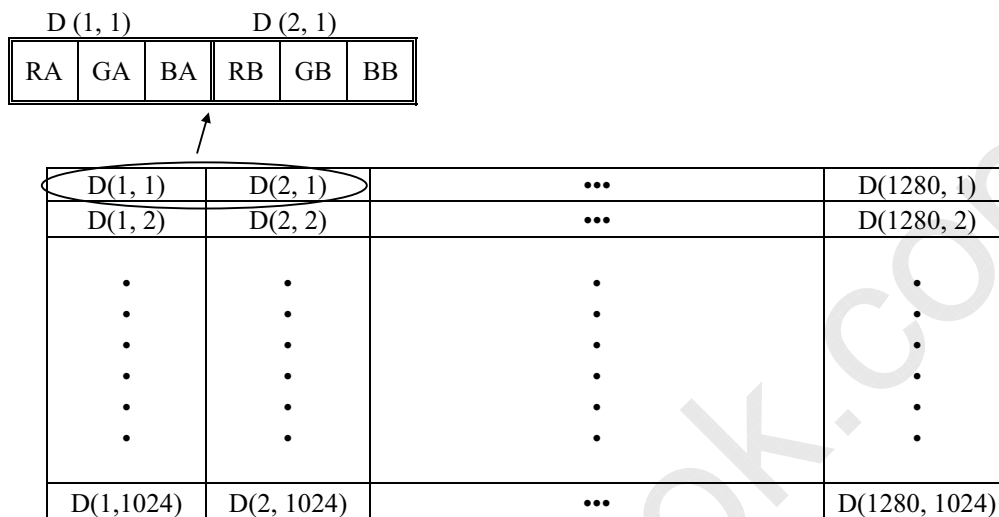

Display colors		Data signal (0: Low level, 1: High level)																																																
		RA7	RA6	RA5	RA4	RA3	RA2	RA1	RA0	GA7	GA6	GA5	GA4	GA3	GA2	GA1	GA0	BA7	BA6	BA5	BA4	BA3	BA2	BA1	BA0

	Up	$\theta R = 0^\circ, \theta L = 0^\circ, CR \geq 10$	θU	70	88	-	°		
	Down	$\theta R = 0^\circ, \theta L = 0^\circ, CR \geq 10$	θD	70	88	-	°		

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

Ta = 25°C, VDD = 5.0V, VDDb = 12.0V, At the maximum luminance control,
Display mode: SXGA, Horizontal cycle = 1/64.0kHz, Vertical cycle = 1/60.0Hz

Optical characteristics are measured after 20minutes from working the product, in the dark room. Also measurement methods are as follows.

Note3: See "4.11.2 Definition of contrast ratio".

Note4: See "4.11.3 Definition of luminance uniformity".

Note5: These coordinates are found on CIE 1931 chromaticity diagram.

Note6: Product surface temperature: TopF = 35°C

Note7: See "4.11.4 Definition of response times".

Note8: See "4.11.5 Definition of viewing angles".

PRELIMINARY

NLT Technologies, Ltd.

NL128102AC29-17

4.11.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance of white screen}}{\text{Luminance of black screen}}$$

4.11.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula.

$$\text{Luminance uniformity (LU)} = \frac{\text{Maximum luminance from ① to ⑤}}{\text{Minimum luminance from ① to ⑤}}$$

The luminance is measured at near the 5 points shown below.

4.11.4 Definition of response times

Response time is measured, the luminance changes from "black" to "white", or "white" to "black" on the same screen point, by photo-detector. Ton is the time it takes the luminance change from 10% up to 90%. Also Toff is the time it takes the luminance change from 90% down to 10% (See the following diagram.).

4.11.5 Definition of viewing angles

PRELIMINARY

NLT Technologies, Ltd.

NL128102AC29-17

5. ESTIMATED LUMINANCE LIFETIME

The luminance lifetime is the time from initial luminance to half-luminance.

This lifetime is the estimated value, and is not guarantee value.

Condition		Estimated luminance lifetime (Life time expectancy) Note1, Note2, Note3	Unit
LED elementary substance	25°C (Ambient temperature of the product) Continuous operation, PWM: Duty 100%	70,000	h

Note1: Life time expectancy is mean time to half-luminance.

Note2: Estimated luminance lifetime is not the value for LCD module but the value for LED elementary substance.

Note3: By ambient temperature, the lifetime changes particularly. Especially, in case the product works under high temperature environment, the lifetime becomes short.

6. RELIABILITY TESTS

Test item		Condition	Judgment Note1
High temperature and humidity (Operation)		① $60 \pm 2^{\circ}\text{C}$, RH = 90%, 240hours ② Display data is white.	No display malfunctions
Heat cycle (Operation)		① $-20 \pm 3^{\circ}\text{C}$...1hour $70 \pm 3^{\circ}\text{C}$...1hour ② 50cycles, 4hours/cycle ③ Display data is white.	
Thermal shock (Non operation)		① $-30 \pm 3^{\circ}\text{C}$...30minutes $80 \pm 3^{\circ}\text{C}$...30minutes ② 100cycles, 1hour/cycle ③ Temperature transition time is within 5 minutes.	
Vibration (Non operation)		① 5 to 100Hz, 11.76m/s^2 ② 1 minute/cycle ③ X, Y, Z directions ④ 10 times each directions	No display malfunctions No physical damages
Mechanical shock (Non operation)		① 294m/s^2 , 11ms ② X, Y, Z directions ③ 3 times each directions	
ESD (Operation)		① 150pF, 150Ω , $\pm 15\text{kV}$ ② 9 places on a panel surface Note2 ③ 10 times each places at 1 sec interval	No display malfunctions
Low pressure	Non-operation	① 15 kPa ② $-30^{\circ}\text{C} \pm 3^{\circ}\text{C}$...24 hours ③ $80^{\circ}\text{C} \pm 3^{\circ}\text{C}$...24 hours	
	Operation	① 53.3 kPa ② $-20^{\circ}\text{C} \pm 3^{\circ}\text{C}$...24 hours ③ $70^{\circ}\text{C} \pm 3^{\circ}\text{C}$...24 hours	

Note1: Display functions are checked under the same conditions as product inspection.

Note2: See the following figure for discharge points

7. PRECAUTIONS

7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. **Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS"!**

This sign has the meaning that a customer will be injured or the product will sustain damage if the customer practices wrong operations.

This sign has the meaning that a customer will be injured if the customer practices wrong operations.

7.2 CAUTIONS

- * Do not touch the working backlight. There is a danger of burn injury.
- * Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: Equal to or no greater than 294m/s^2 and equal to or no greater than 11ms, Pressure: Equal to or no greater than 19.6 N ($\phi 16\text{mm}$ jig))

7.3 ATTENTIONS

7.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② When the product is put on the table temporarily, display surface must be placed downward.
- ③ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ④ The torque for product mounting screws must never exceed 0.67N·m. Higher torque might result in distortion of the bezel. And the length of product mounting screws from surface of plate (product side) must be $\leq 3.0\text{ mm}$
- ⑤ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura. Recommended installing method: Ideal plane "A" is defined by one mounting hole (datum point) and other mounting holes. The ideal plane "A" should be the same plane within $\pm 0.3\text{ mm}$.

PRELIMINARY

NLT Technologies, Ltd.

NL128102AC29-17

- ⑥ Do not press or rub on the sensitive product surface. When cleaning the product surface, wipe it with a soft dry cloth.
- ⑦ Do not push or pull the interface connectors while the product is working.
- ⑧ When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- ⑨ Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal by any chance, please wash it away with soap and water.

7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurred by temperature difference, the product packing box must be opened after enough time being left under the environment of an unpacking room. Evaluate the storage time sufficiently because dew condensation is affected by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with the original packing state after a customer receives the package)
- ③ Do not operate in high magnetic field. If not, circuit boards may be broken.
- ④ This product is not designed as radiation hardened.

7.3.3 Characteristics

The following items are neither defects nor failures.

- ① Response time, luminance and color may be changed by ambient temperature.
- ② Display mura, flickering, vertical streams or tiny spots may be observed depending on display patterns.
- ③ Optical characteristics (e.g. luminance, display uniformity, etc.) gradually is going to change depending on operating time, and especially low temperature, because the LCD has cold cathode fluorescent lamps.
- ④ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- ⑤ The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑥ Optical characteristics may be changed depending on input signal timings.
- ⑦ The interference noise between input signal frequency for this product's signal processing board and luminance control frequency of the LED driver board may appear on a display. Set up luminance control frequency of the LED driver board so that the interference noise does not appear.

7.3.4 Others

- ① All GND, VDD, GNDB and VDDDB terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ The LCD module by itself or integrated into end product should be packed and transported with display in the vertical position. Otherwise the display characteristics may be degraded.
- ④ Pack the product with the original shipping package, in order to avoid any damages during transportation, when returning the product to NLT for repairing and so on.
